

# PROJECT AIM AND OBJECTIVES

Pro-VET introduces a systematic approach to continuous professional development on European VET policy and practice for VET teachers (in-service trainers, instructors, mentors etc.) and HE teachers engaged in VET teacher training in both school and work-based settings for Serbia and Russia by e-learning tools by

- Training the HE teachers of the two partner countries on using European VET initiatives, best methods and pedagogical approaches and to capacitate them in creating development-oriented in-service training courses for VET teacher training
- Setting up national e-labs on the base of the 8 partner countries' institutes for producing and disseminating content and courses on European VET policy, practice and methods
- Setting up VET Educator's Training Network (VET-ETN) on the base of an open access e-learning platform, which serves also as a gateway to partners' websites and social networks around established national laboratories providing forums, training and communication on European VET policy, theory and practice
- Ensuring after-effect sustainability of the VET-ETN and to consolidate their role in VET development nationally and build their networks with VET providers, industry, work-life and policy makers
- Co-designing roadmaps for VET development in line with European policy and practice in Russia and Serbia in a policy dialogue with National Ministries of Education.

Проект Pro-VET – это инструмент укрепления взаимного доверия для совместного развития профессионального образования и обучения России и Сербии на основе лучших Европейских практик, использующих онлайн обучение для повышения квалификации преподавателей и мастеров производственного обучения колледжей и вузов.

Пројект Pro-VET представља систематски приступ и заједнички подухват у развијању стручног образовања у Русији и Србији, заснован на најбољим европским праксама које користе онлајн обуку за усавршавање компетенција наставника на високим струковним школама и факултетима.

# THE PROJECT CONSORTIUM

The driving rationale behind the Pro-VET consortium is the development of a strong partnership between twelve key HE institutions in four European Member States (Finland, Ireland, Germany and Netherland) and two Partner Countries (Russia and Serbia), which would be strategically positioned to facilitate and promote the Pro-VET concept focused on building a network of HEIs providing teacher training to the VET sector in Russia and Serbia, capacitating this network on European practices in VET and ensuring the sustainability of this network.

The capacity building is focused on the core team of 8 HEIs from Russia and Serbia with emphasis on the academic staff – teacher trainers and support researchers where necessary. The ICT capacity upgrading will affect the 8 HEIs by developing modern interactive e-learning labs for each institution to be used in teacher training, course development and as a showcase learning environment.
